

# Nikesh Khanal

## Full Stack Developer

Godamchowk , Banepa • 9840026348 • nikeskhkhanal@gmail.com

I'm a creative MERN stack developer who loves building web applications from scratch. I focus on making user-friendly interfaces with React and handling backend logic with Node.js, Express, and MongoDB. I've worked on projects like job portals, hackathon platforms, quizzes and service booking websites, implementing authentication, CRUD operations, and problem-solving algorithms. I enjoy learning new things and improving my skills to build better and more efficient applications.

## EDUCATION

---

### Bachelors in Computer Application

Banepa

*Nist College*

Present

### +2 Science

*Kshitij English Boarding School*

## PROJECTS

---

### Task Management System

I began my first project as an part time frontend developer in this project. I used simple Javascript logic and CSS for styling.

### Quiz, Hackathon and Job Portal

I created job portal, quiz system with leaderboard and hackathon management system in a single project. I created two roles of user and organization. The organization would conduct the Job opportunities, Quiz Contest and Hackathon creation and the participate or student will participate on those events.

### Service Booking System

I am currently doing this project as my college project. Its about booking the services like plumber, electrician, cook etc. I used Haversine Algorithm to find the nearest employee. It will be ready in June 2025.
