SUMMARY

I'm a creative MERN stack developer who loves building web applications from scratch. I focus on making user-friendly interfaces with React and handling backend logic with Node.js, Express, and MongoDB. I've worked on projects like job portals, hackathon platforms, quizzes and service booking websites, implementing authentication, CRUD operations, and problem-solving algorithms. I enjoy learning new things and improving my skills to build better and more efficient applications.

SKILLS

- Communication
- Web Development
- CSS/JavaScript/React
- Public Speaking
- presentation
- Tailwind Css

LANGUAGE

English

Nepali

MERN Stack Training

Sipalaya: IT training and internships / 2025

PROJECTS

Task Management System

I began my first project as an part time frontend developer in this project. I used simple Javascript logic, CSS and HTML for coding.

Quiz, Hackathon and Job Portal

I created job portal, quiz system with leaderboard and hackathon management system in a single project.

Service Booking System

I am currently doing this project as my college project. Its about booking the services like plumber, electrician, cook etc.
